Never compromise
– get perfect vision

Welcome

The power of experience

It gives me a great pleasure to welcome you to EuroEyes Eye Clinics around the world. Even though our company has got locations all throughout Denmark, UK, China and Hong Kong, our company's foundation lies within Germany. We have been improving people's visions in this country since 1990. And with fifteen different Eye Clinics around Germany dedicated to this task, we have proven ourselves various times to be the best contact for eye surgeries.

Laser Eye Surgery is my life's passion. The motivation to improve people's vision has defined my career. Since qualifying as an ophthalmologist in 1986 I have challenged myself continually to seek new innovations in laser eye surgery that will raise the standards of my profession. I have been fortunate to work with many of the global leaders in my field who have provided me with the inspiration to develop EuroEyes into the largest international brand of laser eye clinics in Europe.

EuroEyes' German heritage is important as it defines our total commitment to quality, technology and excellence. I believe in always doing the best I possibly can

and this spirit is integral to EuroEyes. Together with my colleagues, we challenge ourselves to exceed the highest international quality and safety standards, to employ the latest advanced technology and to ensure that we provide absolute excellence in our results.

Our top surgeons have successfully performed over 1,000,000 eye operations, giving our patients a life without glasses. EuroEyes is a brand that you can trust and believe in.

We are continuing on our path with commitment to make a future without glasses and contact lenses a reality.

Dr. med. Jørn S. Jørgensen
Medical Director & Founder of the
EuroEyes Clinical Group

Introducing:

top doctors and top quality

EuroEyes is proud to have some of the world's leading eye doctors. Our team of highly experienced surgeons combine uncompromising quality, safety and expertise to give you the best treatment available.

TOP SURGEONS
Listed among the best
surgeons in Europe

PROVEN QUALITY
30 years of experience
1.000.000 treatments

INNOVATION
Worldwide first with
state of the art technology

Our solution is your key to unlock the door of life

If you are nearsighted

Nearsightedness (myopia) is a refractive error that makes close-up objects clear, while distant objects are blurred. There are various surgical methods to cure myopia. EuroEyes is a leader in laser surgery that is innovative and gentle on the eye.

Our solution for you is SMILE Pro.

[Read more on page 10](#)

If you are high nearsighted

Nearsightedness (myopia) is the most common vision defect in Germany. Even high levels of nearsightedness can be effectively treated. This also goes for high levels of farsightedness and astigmatism.

Our solution for you is ICL (Intraocular Contact Lens) – the implantable contact lens.

[Read more on page 14](#)

If you are 45+ and need progressive or reading glasses

For people who are over 45 years of age and have trouble seeing far-away and close-up without glasses.

Our solution for you is the Multifocal Lens Implant.

[Read more on page 16](#)

If you have a cataract

A cataract is a clouding of the lens and is the leading cause of vision loss in people over the age of 65. Clear vision far and near can be restored.

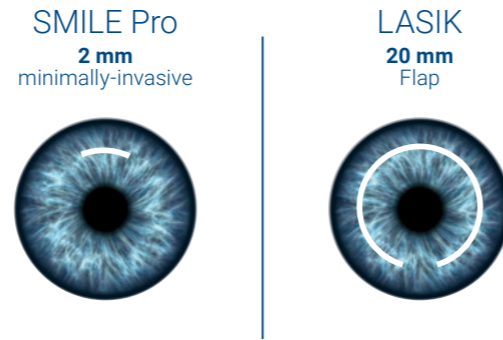

Our solution for you is the Cataract Extraction.

SMILE Pro

Laser Vision Correction beyond LASIK

SMILE Pro is a further development of Femto-LASIK and the safest and gentlest laser eye surgery procedure in laser vision correction.

1 Flapless, safe and gentle

SMILE Pro has turned the world of refractive surgery on its head. Previously in LASIK a side-cut of roughly 20mm had to be created, which severs the nerves and is known to cause dry eye. In SMILE Pro treatment, a small incision of only 2mm is sufficient. SMILE Pro combines state-of-the-art femtosecond technology with high-precision lenticle extraction.

2 No dry eyes

For many patients with dry eyes an eye laser surgery was not possible. With SMILE Pro however patients with dry eyes and myopia can now be treated in the safest possible way.

Characteristics of the SMILE Pro treatment

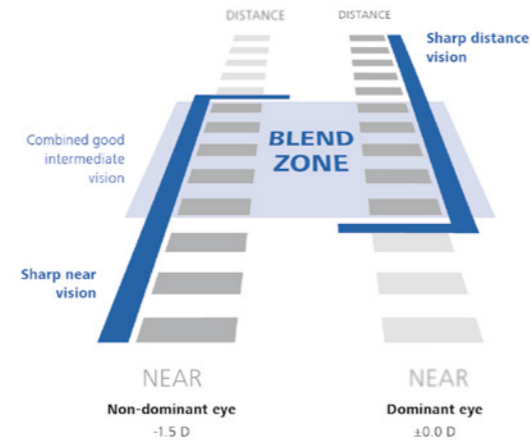

- Myopia of 1,0 to -10 Dpt.
- Astigmatism to 5 Dpt.
- Painless procedure
- Minimally invasive surgery
- Fast visual recovery

Presbyond

Laser Vision Correction at age 40

With the Presbyond Laser Blended Vision method, both eyes are separately optimised for distance and near vision, so that you can see all details sharply in all distances.

1 A modern and safe laser eye treatment for presbyopia

Professor Dan Reinstein (founder of the London Vision Clinic) has developed "Presbyond Laser Blended Vision", a modern and innovative method of eye laser treatment for patients over 40, which avoids the need to replace the natural lens with an artificial lens. Professor Reinstein is internationally renowned for his outstanding achievements in the field of refractive surgery.

2 No lens exchange necessary

For patients over 40 who want to see clearly without replacing their natural lens, the Presbyond procedure is an ideal way to get rid of their glasses.

Characteristics of Presbyond

- Myopia of 1,0 to -8 Dpt.
- Hyperopia to +2 Dpt.
- Painless procedure
- No lens exchange necessary
- Fast visual recovery

Implantable Contact Lens (ICL) ICLs for high myopic eyes.

your vision is our profession

The ICL is a phakic intraocular lens implanted into the eye to effectively treat people with high nearsightedness (myopia). Patients enjoy a fast recovery and excellent quality of vision. Astigmatism and farsightedness can also be treated.

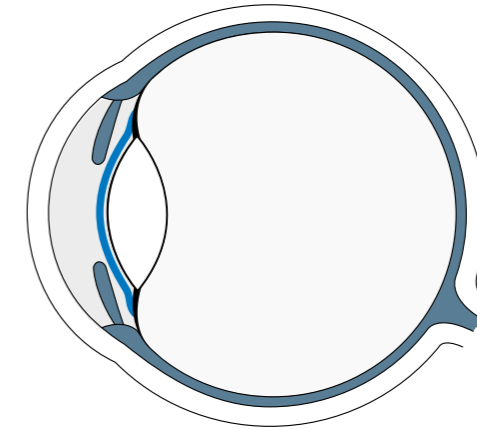

1 Freedom from glasses

The lens is implanted permanently to sit between the Iris and the lens in the eye. This is the treatment of choice for high refractive errors in people under 45 years

2 Minimally invasive & pain free

The lens is implanted through a small incision which heals without a suture. The vision normally clears on the same day as surgery, and recovery is within a matter of days.

the most ICLs in Europe***

*2022

Multifocal / Trifocal Lens

no more glasses,
no more reading glasses!

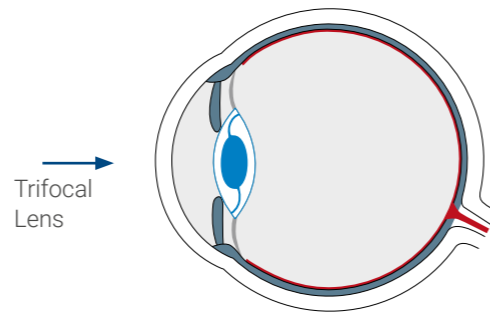

Presbyopia onsets around 45 years when reading and viewing close objects becomes increasingly more difficult. Reading glasses are then needed to see clearly. People who already wear glasses for distance vision, then need a second pair; or progressive lenses. EuroEyes implants the latest generation Trifocal Lens to give you clear near, middle and distance vision.

1 A life without glasses

The natural lens is removed and the Trifocal Lens is implanted with eye drop anaesthesia. It takes 10 minutes, is pain free and permanent

2 Laser-assisted surgery

The latest development in Multifocal Lens surgery is the use of a laser (LenSx) to replace the surgeons blade. This speeds up visual recovery and accuracy of the outcome

EuroEyes has implanted the most Trifocal Lenses worldwide*

*2024

Cataract Extraction

restoring clear vision

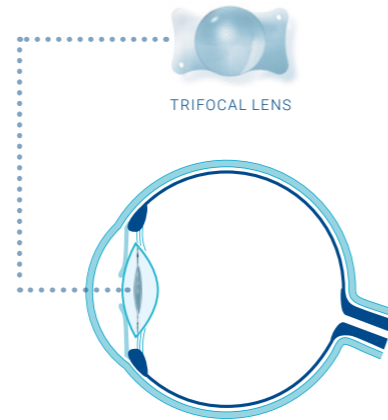

A cataract is a clouding of the lens and is the leading cause of vision loss in people over the age of 65. The only treatment option is a cataract extraction. EuroEyes recommends implanting the latest Trifocal Lens, for clear vision without distance or reading glasses.

1 The ageing process

The ageing lens not only loses flexibility as one gets older, but also becomes increasingly cloudy in elderly people. This cataract is removed under eye drop anesthesia, and replaced with an implant to restore clear vision.

2 Long term experience

EuroEyes has specialized in treating cataracts since 1993. Dr Jörgensen was one of the first eye surgeons in Germany to perform the revolutionary "small incision" (phakoemulsification) technique for cataract surgery. He was also one of the first in Europe to use a laser (LenSx) to assist the removal of the hardened lens.

EuroEyes.

over 30 years of long term proven experience

EuroEyes has implanted the **most** trifocal lenses worldwide, to remove the need for reading glasses.

EuroEyes was the **first** worldwide to introduce the only certification standards for laser eye surgery

EuroEyes is one of the **first** worldwide to perform laser lens removal in cataract surgery

EuroEyes implants the **most** ICL lenses in Europe to treat high myopia, hyperopia and astigmatism

EuroEyes – **first** in quality and experience

Quality and safety,

we never compromise

SAFETY	EuroEyes, the first worldwide to introduce certification standards in laser eye surgery = LASIK TÜV
INNOVATION	EuroEyes was amongst the first to introduce "state of the art" technologies in refractive surgery. This includes SMILE Pro - small incision laser surgery (no more flap!), Laser Assisted Cataract Surgery (LenSx laser) and the Trifocal Lens Implant as a permanent solution for reading glasses.
EUROEYES DOCTORS	EuroEyes listed yearly among the best doctors and surgeons in Europe. EuroEyes doctors and surgeons are rated yearly amongst the best in Europe (by FOCUS and stern, leading European magazines)
CHARITY AND SPONSORSHIP	EuroEyes' experience of over 15 years of international charity work proves dedication to social responsibility

INTERNATIONAL BRAND	EuroEyes Eye Clinics in Great Britain, Germany, China and Denmark serve patients from all corners of the globe
---------------------	--

QUALITY MANAGEMENT	EuroEyes analyses all operation results to optimise quality and safety.
--------------------	---

ALL REFRACTIVE PROCEDURES	EuroEyes has the philosophy that every eye is unique and deserves a customized treatment. EuroEyes offers the whole spectrum of refractive surgery to provide solutions to rid people of their glasses and contact lenses.
---------------------------	--

PROVEN EXPERIENCE	EuroEyes has carried out more than 1.000 000 eye surgeries over 30 years, making it one of the most renowned and experienced clinic groups for refractive surgery worldwide.
-------------------	--

TOP LOCATIONS	EuroEyes clinics have top locations conveniently situated in the city centers of major cities in Great Britain, Germany, China and Denmark.
---------------	---

Innovative Technology

medical eye care made in Germany

EuroEyes continuously strives to reach the highest standards of refractive surgery by combining innovation, surgical excellence and First Class Service. EuroEyes fulfills this requirement by playing a pioneering role in new technologies such as Femtosecond-Laser, Excimer-Laser, LenSx, SMILE Pro and Wavefront-guided technology (iDesign).

EuroEyes introduced the femtosecond laser to offer a painless treatment removing the need to cut the eye with a blade. This can be applied to the cornea (SMILE Pro) or the inner eye for lens exchange surgery (LenSx) and optimizes safety, accuracy and speed of healing for the patient after surgery.

Welcoming our international patients

EuroEyes specialises in the exclusive treatment of international patients who visit to our clinics in Great Britain, Germany, Denmark and China for surgery. We know your health and well being is our mission; but your comfortable stay and experience in the city and clinic of your choice is at the forefront of our service. We are able to facilitate the arrangement of visas by providing the relevant visa offices in your respective countries with the necessary documentation concerning your treatment with us. Giving you help and advice booking your hotel, or arranging airport pick-ups are also part of our service to you

The advisable length of stay you should plan for your surgery is around 1 week. During this time you will be able to enjoy the sights and sounds of the destination of your choice. As the EuroEyes clinics are situated in major cities there are also adequate shopping, sightseeing and entertainment opportunities close by. We are looking forward to seeing you at a destination of your choice.

Aftercare instructions:

You will be given a medication pack after your surgery.

Following treatment, you can carry out most of your daily activities but take note of the following:

- Eye shields to be worn when sleeping for 1 week
- Sunglasses outdoors for 1 week
- No water near the eye area (eyebrow to cheekbone) for 1 week
- Sports/ fitness after 2 weeks and contact sports after 4 weeks
- No Sauna or Hot tubs for 4 weeks
- No Swimming for 3 weeks
- Face makeup after 1 week but eye makeup after 2 weeks

Please remember you must attend all aftercare appointments to ensure your eyes are healing as expected on:

1 day | 1 week | 6 weeks | 3 months
